Policy of Alternate Source of Energy and Energy Conservation

The institution has facilities for alternate sources of energy and energy conservation measures:

Use of LED power efficient equipment:

The institution has subsequently reduced energy usage through a variety of initiatives, such as better CRT monitor computer utilisation and better LCD and LED computing systems. Likewise, LED bulbs were used in place of the incandescent ones. Every switchboard has a sign indicating the needed use of electricity so that consumption can be decreased and a message about electricity conservation can be conveyed. By turning on the appropriate devices and leaving them on until their use is finished, electricity consumption is controlled. The essential component for controlling how much electricity is used is a master switch. As a result, the institution takes a number of energy-saving measures.

Percentage of annual lighting power requirements met through LED bulbs and other sources.

Alternate Source of Energy:

1) UPS Invertor:

Two Set of Invertor has been installed in the college.

One is situated at the central library and another one is at administrative building for uninterrupted power supply at the most important place parts of the college.

2) Solar Energy:-

The College has installed a Solar Panel. The Panel is installed in 2022 on rooftop of administrative building.

Policy of Waste Management

Facilities in the institution for the management or the following types of degradable and non-degradable waste:

Solid waste Management:

The practise of gathering and handling solid waste on college campuses is known as solid management. The Institution has a well-designed system in place to handle trash, particularly solid garbage. The following are the management techniques used:

- Solid waste composting process.
- Disposal by hog feeding.
- Disposal by ploughing into the fields.
- Solid waste open burning to the minimum level only in the case of stationery waste.

Every Saturday, the colleges allocated staff members collect the solid garbage, and both teaching and non-teaching staff members participate in a cleaning campaign. The designated hole that was built especially for the purpose receives the rubbish and discards it there. With the help of an MOU, the Municipality of Chirimiri regularly collects trash and helps the college keep the campus clean.

Policy of Water Treatment

Water Conservation Facilities Available in the Institution:

Utilizing water wisely to eliminate wasteful water use is known as water conservation. In order to conserve water, surface and groundwater resources must be protected, managed, and developed, and pollution must be avoided. It is a system that was put in place to manage freshwater, cut down on waste, and safeguard water resources in order to lessen and prevent scarcity.

Rain Water harvesting

A technology called rain water harvesting is used to capture, transport, and store rain for later use. It entails the direct collection and storage of run-off rainwater for subsequent direct usage. One of the most effective practises and procedures used to encourage water conservation is the rainwater gathering system.

The primary objective of rain water harvesting at Govt. Lahiri PG College, Koriya (C.G.) is groundwater recharge. Every year, around 95% of the water that is harvested is used to replenish underground water reserves and aquifers. Ground water management using roof top harvesting as a cost-effective way to increase ground water in the campus has been started. Implementing rainwater harvesting is advantageous since it lowers the demand on the available water supply and lowers runoff, erosion, and contamination of surface water.

Policy of Green Campus

Green campus initiatives include:

The institutional initiatives for making the campus green are as follows:

- Vehicle entry restrictions.
- Use of bicycles and battery-powered vehicles.
- Pedestrian-friendly pathways and a ban on the usage of plastic.
- Using plants and trees for landscaping

Use of Bicycles/Battery Powered Vehicles

Bicycles are used by students from neighbouring communities to travel to the college. They are urged to utilise bicycles as much as possible to minimise fuel consumption and pollution and improve the environment on campus. This initiative reduces pollution and is environmentally friendly. Many students commute from urban areas and frequently drive the increasingly common battery-powered vehicles. Private battery-powered rickshaws used by students are commonly spotted close to the university.

- **Pedestrian Friendly pathways**
For staff and students to move securely and freely throughout the college campus, pedestrian-friendly pathways have been created.
- **Ban on use of Plastic**
To stop the use of plastic, it is absolutely prohibited to use products made of plastic, including cups, utensils, bottles, and bags. Staff members and students are also involved in awareness campaigns. Students and staff are reminded to avoid using plastic water bottles and to use steel or copper containers instead. It made it easier to keep pollution and plastic from contaminating the campus.

Policy of Disable Friendly Environment

The Institution has Disabled - friendly, barrier free environment

"Person with disability" refers to a person who has a long-term physical, mental, intellectual, or sensory impairment that, when combined with other factors like hurdles, prevents him from fully and equally participating in society. Invisible disabilities, such as psychological and emotional disorders, learning difficulties, heart disease, diabetes, asthma, arthritis, epilepsy, acquired brain injuries (ABI), acquired immune deficiency syndrome (AIDS), and others are also included.

On February 7, 1996, the Persons with Disabilities (Equal Opportunities, Protection of Rights, and Full Participation) Act, 1995, became law. It is an important step that guarantees that those with impairments have equal chances. Discrimination against people with physical and mental disabilities is prohibited by the Policy for Persons with Disabilities Right of Persons with Disabilities Act, 2016. The institution strives to make all of its administrations, programmes, and events accessible to both staff and students. To ensure that the benefits of grounds programmes, administrations, and other learning activities are available to the disabled, every member of the college's teaching and non-teaching staff is constantly prepared to lend a helping hand.

Facilities available for Teaching, Non-Teaching staff and Students

- According to their needs, Two Wheeler provided for the teachers and staff.
- Staffs are trained to assist persons with disabilities, including persons with learning disabilities.
- To provide necessary guidance and counseling to disable persons. It is expected that the Institutes facilitate admission of disable persons in various courses.
- Create awareness about the needs of disabled persons, and other general issues concerning their learning.
